Lab - Research Laptop Specifications

Laptops often use proprietary parts. To find information about the replacement parts, you may have to research the website of the laptop manufacturer.

Before you begin this lab, you need to know some information about the laptop.

Your instructor will provide you with the following information:

Laptop Manufacturer:	Dell Inc.
Laptop Model Number:	G3 15 3579
Amount of RAM:	32 GB
Size of the Hard Drive:	1 TB 5400 R

Answer the following regarding your laptop model.

1. Use the Internet to locate the website for the laptop manufacturer. What is the URL for the website?

   The main website for the manufacturer is https://www.dell.com. For direct access to their support and manual section, the URL is https://www.dell.com/support.

2. Locate the service section of the website and look for links that focus on your laptop. It is common for a website to allow you to search by the model number. List the links you found specific to the laptop and include a brief description of the information in that link.

   Drivers & Downloads: ***This page is essential for keeping the laptop running smoothly. It contains the latest BIOS updates, thermal management drivers, and the specific NVIDIA graphics drivers for this model's GPU.***

   Documentation (Service Manual): ***This link provides a PDF manual that is actually very detailed. It shows you exactly how to take the laptop apart, including how to swap out the 5400 RPM hard drive for an SSD or how to access the RAM slots.***

   Parts & Repairs: ***This section lists officially compatible replacement parts, such as the 56Wh 3-cell battery or a replacement AC adapter, ensuring you don't buy a part that doesn't fit the proprietary connectors.***

3. Briefly describe any service notices you found on the website. A service notice example is a driver update, a hardware issue, or a recall notice for a laptop component.

   I found several critical BIOS updates (such as version 1.15.0) that were released to address security vulnerabilities and improve system stability. Interestingly, while not an official "recall," there are many service notes and community advisories regarding the hinge design. Many users reported that the

hinge could become stiff and eventually pull the plastic bezel away from the screen, so Dell has various support articles on how to handle "wear and tear" vs. manufacturing defects for this specific G3 series.

4. Open forums may exist for your laptop. Use an Internet search engine to locate any open forums that focus on your laptop by typing in the name and model of the laptop. Briefly describe the websites (other than the manufacturer website) that you located.

Reddit: ***This is probably the most active community for this laptop. There are hundreds of threads specifically about the G3 15 3579 where users share tips on "undervolting" the CPU to keep it from getting too hot while gaming.***

NotebookCheck: ***This site has a very deep dive into the 3579 model. In their forum/comment section, owners discuss the performance difference when upgrading from the slow 5400 RPM HDD (which was provided in my specs) to a much faster NVMe SSD.***

Tom's Hardware: ***I found several troubleshooting threads here where users help each other fix "blue screen" errors or driver conflicts specifically related to the Windows 10/11 updates on this hardware.***
